Banking System

The banking system is an application for maintaining a person's account in a bank. The system provides access to the customer to create an account deposit/withdraw the cash from his account. It also allows the admin to manage the banking system. Our banking system will cover all concepts of OOP such as Abstraction, Encapsulation, Polymorphism, and Inheritance

The customer will be able to do transactions such as withdraw, deposit, and transfer amount and manage his account while admin can manage accounts of the whole bank.

Proper error checking will be done, and more features will be added if the project gets completed beforehand.
